Autodesk® Vault 2016
# Top reasons to buy/upgrade

Create order from design file chaos

Centralize the storage of engineering data and documentation, improve collaboration, and control development processes
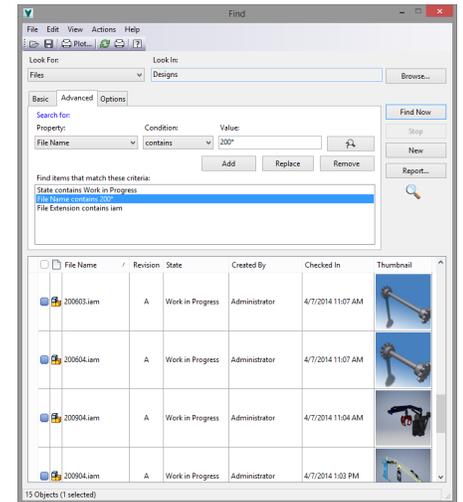

Seamless Autodesk CAD integration

Autodesk Data Management software—Autodesk® Vault Workgroup and Autodesk® Vault Professional—are tightly integrated with more than 30 Autodesk design applications, such as Autodesk® Inventor®, Autodesk® AutoCAD® Electrical, Autodesk® AutoCAD® Mechanical, and Autodesk® AutoCAD® software. This deep integration makes it easier to manage data associated with your digital prototype from engineering through manufacturing—saving time and helping to preserve data accuracy.

Find data quickly

Simplify the frustrating search for files using the range of methods available in Vault—including saved searches, multiple search criteria, and shortcuts. When you reduce the time it takes to find and organize data, you can spend more time designing and less time searching.

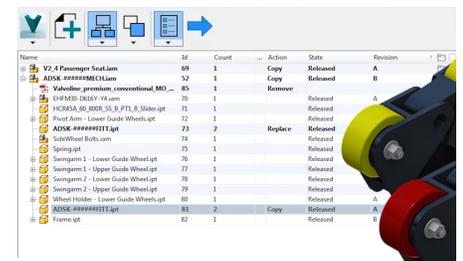

Teamwork and collaborative design

Team members can work on a digital prototype without overwriting each other's data thanks to multiuser functionality. Team members check out a design before making modifications, then check it back in when they're done. With everyone working together, you can better balance resources, speed projects to completion, and meet tight deadlines.

Rapidly copy and reuse data

Save hours of design time when you stop manually recreating or duplicating complex models and drawing sets. Using Autodesk data management software, you can copy a digital prototype—including all related files and documentation—for use in a new design. It's easy to configure the files you want to replace, reuse, or copy.

Simple administration and configuration

Vault Workgroup and Vault Professional provide tools to manage your Vault server, which can help you experience maximum uptime. Intuitive administrative tools make server management easier even for those with minimal IT knowledge.

AUTODESK

Control design data access with revision management

Audit and track the revision history of your data files from a single location. Reduce design and manufacturing errors by securely releasing and tracking files throughout the design cycle, helping make sure that team members access the correct version of data.

Share data outside of the design group

Make your engineering data visible to your entire team by integrating Autodesk Vault and Microsoft® SharePoint® collaboration software. Extended team members can search, preview, and download visualization files stored in Vault and participate in engineering processes—such as change order requests and reviews—using SharePoint workflows to share information with the rest of the organization.

Scalability for multiple sites and large workgroups

Work together easily and efficiently—no matter where your team members are in the world. Track and manage all your data in a central, secure location and share working files across a wide area network (WAN). Engineers worldwide can work on designs confidently, knowing they are using the latest revision of the file.

## Automated release and change processes

Manual processes for release and change can lead to design project delays and shop-floor errors. Autodesk Vault Professional software gives design teams the choice of standard or configurable processes for release and engineering change order management, helping them avoid costly mistakes and remove process bottlenecks.

Coexist and exchange data with enterprise business systems

Take full advantage of the advanced functionality in Autodesk Vault Professional software with powerful tools to manage bills of materials (BOMs) and promote earlier collaboration by exchanging data with manufacturing business systems.

Extend value with Autodesk Maintenance Subscription

Extend the value of your software investment with access to the latest releases and web services. Additional benefits that enhance productivity include expedited technical support and flexible licensing options. Technical support responses delivered by Autodesk resources provide a high-quality service experience. Learn more at www.autodesk.com/maintenance-subscription.

Now is the time
