

Let's build better products.

PLM Technical Consultant

KETIV is seeking a talented Product Lifecycle Management (PLM) Technical Consultant to understand customer requirements and provide solutions built on Autodesk PLM360.

Responsibilities

- Work with the sales team to determine customer PLM requirements and develop a solution configuration.
- Produce written specifications to capture business requirements for proposed solutions and configuration activities.
- Develop and document data/object model to meet customer requirements.
- Develop system architectures and system planning.
- Participate in all phases of software implementation projects.
- Deliver customized and configured solutions on top of Autodesk core products in the manufacturing domain.
- Identify business requirements, functional design, process design (workflow mapping) testing and training.
- Lead training and adoption efforts for customers.
- Some travel will be required.

Qualifications

- Knowledge of the Product Lifecycle in all areas including Engineering, Change Management, Quality, Compliance, Manufacturing, Facilities, Supply Chain and Field Service.
- Ability to analyze Customer requirements and design solutions to address business scenarios within the defined scope.
- Experience in selling and implementing PLM solutions.
- Knowledge of state-of-the-art engineering and manufacturing best practices such as Six Sigma and Lean Manufacturing.
- Functional knowledge of supply chain management and distribution.
- Knowledge of Data Management within the MCAD/ mechanical engineering/ manufacturing industry.
- Knowledge of SaaS models and Cloud based-technology.

Relevant Skills

- Experience with software development languages and technologies such as JavaScript, HTML, and Web Service Definition Language (WSDL).
- Familiarity with other applications such as Dassault ENOVIA, Siemens PLM Teamcenter, Arena, Aras, and PTC Windchill.
- Middleware/Integration implementation knowledge with systems including ERP, CRM. Knowledge of Jitterbit integration technologies is preferred.
- Knowledge of configuration management techniques and standards including CMII, Lean Manufacturing principles, mixed discipline Bill of Materials (BOM) management including mechanical, electrical and software components.

Let's build better products.

Professional Skills

- Ability to assemble multiple products into a coherent solution for the customer.
- Proven ability to facilitate and document process discussions.
- Strong communication, interpersonal, planning, and organizational skills.
- Proven ability to design, develop and test workflows for and implement practical business solutions.
- Able to multi-task across various projects.
- Adept at understanding and documenting current state processes.
- Excellent oral and written communication skills.
- Excellent skills in resolving customer problems with an “out of the box” and a “can do” approach.

Experience

- Bachelor's degree from an accredited institution in engineering, computer science, or related degree.
- 2 to 5 years of experience in a fast-paced high-performing consulting environment in the PLM domain.

Compensation and Benefits

This is a full time salaried position. The company pays discretionary bonuses quarterly based on profitability and individual performance.

Medical insurance and Personal Time Off are provided to employees. The company offers a 401 (k) plan with matching for qualified employees through Vanguard Funds.
